FOR IMMEDIATE RELEASE

Oliver Machinery Introduces the 10080 8" Benchtop HCX Helical Cutterhead Jointer.

(SEATTLE, WA, April 21, 2026) Our 10080 Benchtop Jointer brings features like the HCX Helical Cutterhead from our commercial jointers to the benchtop market. Featuring a Powerful 2HP 1Ph 15A 120V motor, this jointer delivers reliable and robust cutting power for the toughest materials. The use of our Oliver HCX Helical Shearing Cutterhead ensures a smooth finish with minimal noise and vibration.

The 10080 jointer uses rugged cast-iron for the fence and tables and steel construction for stability and durability. The fold-up steel extension wings provide support for longer materials and space-saving when not in use.

The innovative parallelogram infeed table design guarantees precise alignment and consistent results, ensuring your boards are perfectly flat and ready for your next project.

The NEW 10080 Features:

- Oliver HCX Helical Shearing Cutterhead
- Universal 2HP 120V motor
- 8" Material Cutting Width
- Included extension wings provide a full 56" of material support in a benchtop size
- Cast iron fence and tables
- Parallelogram table design

About Oliver Machinery: Founded in the late 1800's by Joseph W. Oliver and under the current ownership since 1999, Oliver Machinery is a leader in woodworking technology. Committed to delivering innovative and high-quality machines designed to meet the needs of professionals and hobbyists alike. Our products are engineered with precision, durability, and user convenience in mind, ensuring superior performance and reliability.
